

$$g(T_b) = \frac{1}{2} + \frac{1}{2} \tanh \left[\frac{T_b - T_m - T_c}{T_0} \right]$$

Experiment C: $T_0 = 1\text{ }^{\circ}\text{C}$, $T_c = -1\text{ }^{\circ}\text{C}$

Experiment D: $T_0 = 10\text{ }^{\circ}\text{C}$, $T_c = -10\text{ }^{\circ}\text{C}$
